

Allergy Relief Bedding

The Daltex® Allershield® range is a family of breathable and machine washable, multi-layer, polypropylene laminates comprising nonwoven spunbond and a high filtration micro-fibrous membrane specifically designed for allergy relief bedding.

Designed with comfort and protection in mind, Allershield® is up to 36 times more breathable than traditional fabrics such as poly-cottons, providing a hygienic and relieving solution to allergy sufferers.

Allershield® filters out fine particles, generated by dust mites, as air passes through the mattress cover ensuring a cleaner atmosphere.

The Allershield® range carries 2 main products; Allershield® and Allershield® Active, incorporating our silver based antimicrobial proven to kill the feed source of dust mites, providing even greater protection.

The high efficiency of Allershield® ensures up to a 99% reduction in dust released into the atmosphere and is proven to be effective by independent testing carried out by The Institute of Occupational Medicine.
